

ISO7340C, ISO7340FC, ISO7341C, ISO7341FC, ISO7342C, ISO7342FC

SLLSEI6G - SEPTEMBER 2014 - REVISED JANUARY 2017

ISO734x Robust EMC, Low-Power, Quad-Channel Digital Isolators

Features

- Signaling Rate: 25 Mbps
- Integrated Noise Filter on the Inputs
- Default Output High and Low Options
- Low Power Consumption, Typical I_{CC} per Channel
 - ISO7340x: 0.9 mA (5-V Supplies), 0.7 mA (3.3-V Supplies)
 - ISO7341x: 1.2 mA (5-V Supplies), 0.9 mA (3.3-V Supplies)
 - ISO7342x: 1.3 mA (5-V Supplies), 0.9 mA (3.3-V Supplies)
- Low Propagation Delay: 31 ns Typical (5-V Supplies)
- 3.3-V and 5-V Level Translation
- Wide Temperature Range: -40°C to 125°C
- 70-KV/μs Transient Immunity, Typical (5-V Supplies)
- Robust Electromagnetic Compatibility (EMC)
 - System-level ESD, EFT, and Surge Immunity
 - Low Emissions
- Operates from 3.3-V and 5-V Supplies
- Wide-Body SOIC-16 Package
- Safety-Related Certifications:
 - 4242-V_{PK} Basic Isolation per DIN V VDE V 0884-10 and DIN EN 61010-1
 - 3-KV_{RMS} Isolation for 1 minute per UL 1577
 - CSA Component Acceptance Notice 5A, IEC 60950-1 and IEC 61010-1 End Equipment Standards
 - GB4943.1-2011 CQC Certified

2 Applications

- Optocoupler Replacement in:
 - Industrial Fieldbus
 - **Profibus**
 - Modbus
 - **DeviceNet Data Buses**
 - Servo Control Interface
 - Motor Control
 - **Power Supplies**
 - **Battery Packs**

3 Description

The ISO734x family of devices provides galvanic isolation up to 3000 V_{RMS} for 1 minute per UL 1577 and 4242 V_{PK} per VDE V 0884-10. These devices have four isolated channels comprised of logic input and output buffers separated by a silicon dioxide (SiO₂) insulation barrier.

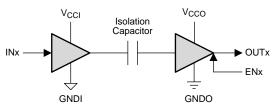

The ISO7340x device has four channels in forward direction, the ISO7341x device has three forward and one reverse-direction channels, and the ISO7342x device has two forward and two reverse-direction channels. In case of input power or signal loss, the default output is low for devices with suffix F and high for devices without suffix F. See the Device Functional Modes section for further details.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE
ISO7340C		
ISO7340FC		
ISO7341C	SOIC (46)	10.20 mm 7.50 mm
ISO7341FC	SOIC (16)	10.30 mm × 7.50 mm
ISO7342C		
ISO7342FC		

(1) For all available packages, see the orderable addendum at the end of the datasheet.

Simplified Schematic

V_{CCI} and GNDI are supply and ground connections respectively for the input channels.

V_{CCO} and GNDO are supply and ground connections respectively for the output.

Table of Contents

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

CI	nanges from Revision F (August 2016) to Revision G	Page
•	Deleted Reinforced from the data sheet title	1
<u>.</u>	the production tested note for the UL V _{RMS} value from the Safety-Related Certifications	10
CI	nanges from Revision E (April 2015) to Revision F	Page
•	Changed the minimum air gap (clearance) parameter (L(I01)) to the external clearance parameter	9
•	Changed the minimum external tracking (creepage) parameter (L(I02)) to the external creepage parameter	9
•	Changed the typ value for the enable propagation delay, high impedance-to-high output parameter of the FC devices and the typ value for the enable propagation delay, high impedance-to-low output parameter of the C devices from 16 to 16000 in the <i>Switching Characteristics—3.3-V Supply</i> table	13
<u>.</u>	Added the Receiving Notification of Documentation Updates section	
CI	nanges from Revision D (March 2015) to Revision E	Page

Changed the TEST Conditions of CTI in Insulation and Safety-Related Specifications for DW-16 Package.
 Changed the Test Conditions of V_{ISO} in Insulation Characteristics.
 Changed column CSA in the Safety-Related Certifications table

Changed the DIN V VDE 0884-10 number in the Features Safety and Regulatory Approvals: Added "Approval Pending" to the CSA Component Acceptance list Item in the Features. 1 Deleted "All Agencies Approvals Planned" from the Features Safety and Regulatory Approvals: 1 Deleted "All Agencies Approvals Planned" from the Features Safety and Regulatory Approvals: 1 Added Note: "Maximum voltage must not exceed 6 V:" to Absolute Maximum Ratings. 7 Added "DT1" to the Minimum internal gap in Insulation and Safety-Related Specifications for DW-16 Package. 9 Changed Voor, "Maximum repetitive peak voltage" To: "Maximum repetitive peak isolation voltage per DIN V VDE V 0884-10" in Insulation Characteristics. 9 Changed Voor, "Maximum surge voltage per DIN V VDE V 0884-10" in Insulation Characteristics. 9 Changed Voor, "Maximum surge voltage per DIN V VDE V 0884-10" in Insulation Characteristics. 9 Changed Voor, "Maximum surge voltage per DIN V VDE V 0884-10" in Insulation Characteristics. 9 Changed Voor, "Insulation Characteristics. 9 Changed Voor, Text Conditions in Insulation Adalest Precitated Specifications for DW-16 Package From: "In To: "In S = 150" C 9 Changed the Safety-Related Certifications table. 10 Changed the From: "ICS Safety Limiting Values" To: Safety Limiting Values. 10 Changed dill Prom: "ICS Safety Limiting Values" To: Safety Limiting Values. 10 Changed Win Value for Voor, in Note 1 of the Electrical Characteristics. 11 Changed Win Value for Voor, in the Electrical Characteristics. 12 Changed Voor, To Voor in Note 1 of the Electrical Characteristics. 12 Changed Voor In Voor in Note 1 of the Electrical Characteristics. 12 Changed Voor In Voor in Note 1 of the Electrical Characteristics. 12 Changed Promition Table Header information From: InPUT-SIDE Voor To: Voor 0-0.5. 13 Changed From Voor Note 1 To V	Cł	nanges from Revision C (December 2014) to Revision D	Page
 Deleted "All Agencies Approvals Planned" from the Features Safety and Regulatory Approvals: Changed the Simplified Schematic: V_{CCT} To V_{CCC}, V_{CCC} to V_{CCC} and GND1 to GND1, GND2 to GNDO. Added Notes 1 and 2. Added Note: "Maximum voltage must not exceed 6 V." to Absolute Maximum Ratings. Added Note: "Maximum internal gap in Insulation and Safety-Related Specifications for DW-16 Package. Changed V_{Cott}, "Maximum internal gap in Insulation and Safety-Related Specifications for DW-16 Package. Changed V_{Cott}, "Maximum internal gap in Insulation and Safety-Related Specifications for DW-16 Package. Changed V_{Cott}, "Maximum surge voltage per DIN V VDE VDE V0884-10" in Insulation Characteristics. Changed V_{Cott}, "Maximum surge voltage per DIN V VDE V0884-10" in Insulation Characteristics. Changed V_{Cott}, Text Conditions in Insulation Characteristics. Changed V_{Cott} Text Conditions in Insulation Characteristics. Changed V_{Cott} Text Conditions in Insulation Characteristics. Changed V_{Cott} Text Conditions in Insulation and Safety-Related Specifications for DW-16 Package From: T_s To: T_s = 150°C. Changed R_s Test Conditions in Insulation and Safety-Related Specifications for DW-16 Package From: T_s To: T_s = 150°C. Changed Min Value for V_{Cott} in Note 1 of the Electrical Characteristics. Changed V_{Cott} To: V_{Cott} in Note 1 of the Electrical Characteristics. Changed V_{Cott} To: V_{Cott} in Note 1 of the Electrical Characteristics. Changed Pancion Table Header information From: INPUT-SIDE V_{Cot} To: V_{Cott} and OUTPUT-SIDE V_{Cott} To: V_{Cott} and OUTPUT-SIDE V_{Cott} To: V_{Cott} Changed Pancion Table Header information From: INPUT-SIDE V_{Cott} To: V_{Cott}	•	Changed the DIN V VDE 0884-10 number in the Features Safety and Regulatory Approvals:	1
Changed the Simplified Schematic: V _{CC1} To V _{CC1} V _{CC2} to V _{CC2} and GND1 to GND2, GND2 to GND0. Added Notes 1 and 2 Added Note: "Maximum voltage must not exceed 6 V:" to Absolute Maximum Ratings	•	Added "(Approval Pending)" to the CSA Component Acceptance list item in the Features	1
1 and 2. Added Note: "Maximum voltage must not exceed 6 V:" to Absolute Maximum Ratings	•	Deleted "All Agencies Approvals Planned" from the Features Safety and Regulatory Approvals:	1
Added "DT1" to the Minimum internal gap in Insulation and Safety-Related Specifications for DW-16 Package	•		1
Changed V _{ICRM} "Maximum repetitive peak voltage" To: "Maximum repetitive peak isolation voltage per DIN V VDE V 0844-10" in <i>Insulation Characteristics</i> 9 Changed V _{ICRM} "Maximum surge voltage per DIN V VDE V 0884-10" in <i>Insulation Characteristics</i> 9 Changed V _{ICRM} "Maximum surge voltage per DIN V VDE 0884-10" To: "Maximum surge isolation voltage per DIN V VDE V 0884-10" in <i>Insulation Characteristics</i> 9 Changed V _{ICRM} "Maximum surge voltage per DIN V VDE V 0884-10" in <i>Insulation Characteristics</i> 9 Changed V _{ICRM} Test Conditions in <i>Insulation Characteristics</i> 9 Changed V _{PR} From: "DIN V VDE 0884-10" To: "DIN V VDE V 0884-10" in <i>Insulation Characteristics</i> 9 Changed N _P Test Conditions in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: T ₈ To: T ₈ = 150°C 9 Changed the <i>Safety-Related Certifications</i> table 10 Changed the <i>Safety-Related Certifications</i> table 10 Changed MiN value for V _{OH} in the <i>Electrical Characteristics</i> From: V _{CCx} - 0.5 To: V _{CCo} - 0.5 11 Changed MiN value for V _{OH} in the <i>Electrical Characteristics</i> From: V _{CCx} - 0.5 To: V _{CCo} - 0.5 12 Changed MiN value for V _{OH} in the <i>Electrical Characteristics</i> From: V _{CCx} - 0.5 To: V _{CCo} - 0.5 12 Changed V _{CCx} To V _{CCO} in Note 1 of the <i>Electrical Characteristics</i> 19 C Changed V _{CCx} To V _{CCO} in Note 1 of the <i>Electrical Characteristics</i> 19 C Changed Puriotion Table Header information From: INPUT-SIDE V _{CC} To: V _{CC} , and OUTPUT-SIDE V _{CC} To: V _{CC} 12 Changed Device I/O Schematics From: V _{CC} To: V _{CC} on the inputs and V _{CCO} no Output and Enabled 29 C Changed Puriotion Table Header information From: INPUT-SIDE V _{CC} To: V _{CC} , and OUTPUT-SIDE V _{CC} To: V _{CC} 21 Changed Puriotion Table Header information From: INPUT-SIDE V _{CC} To: V _{CC} , and OUTPUT-SIDE V _{CC} To: V _{CC} 21 Changed The Handling Ratings table to ESD Ratings 23 Changed From: 0.014 mm To: 13.5 mm 20 Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 13.5 μm To: 13 μm 20 Changed	•	Added Note: "Maximum voltage must not exceed 6 V:" to Absolute Maximum Ratings	7
O884-10" in Insulation Characteristics 9 Changed V _{I/CDM} From: "DIN V VDE 0884-10" To: "DIN V VDE V 0884-10" in Insulation Characteristics 9 Changed V _{I/CDM} From: "DIN V VDE 0884-10" To: "DIN V VDE 0884-10" To: "Maximum surge isolation voltage per DIN V VDE V 0884-10" in Insulation Characteristics 9 Changed V _{I/CDM} Test Conditions in Insulation Characteristics 9 Changed V _{I/CDM} From: "DIN V VDE 0884-10" To: "DIN V VDE V 0884-10" in Insulation Characteristics 9 Changed V _{I/CDM} From: "DIN V VDE 0884-10" To: "DIN V VDE V 0884-10" in Insulation Characteristics 9 Changed V _{I/CDM} From: "DIN V VDE 0884-10" To: "DIN V VDE V 0884-10" in Insulation Characteristics 9 Changed the Safety-Related Certifications table 150" C 9 Changed the Safety-Related Certifications table 10 Changed the Safety-Related Certifications table 10 Changed the Safety-Related Certifications table 10 Changed MIN value for V _{OH} in the Electrical Characteristics From: V _{CCL} - 0.5 To: V _{CCD} - 0.5 . 11 Changed W _{CCL} To V _{CCD} in Note 1 of the Electrical Characteristics From: V _{CCL} - 0.5 To: V _{CCD} - 0.5 . 12 Changed MIN value for V _{OH} in the Electrical Characteristics From: V _{CCL} - 0.5 To: V _{CCD} - 0.5 . 12 Changed MIN value for V _{OH} in the Electrical Characteristics From: V _{CCL} - 0.5 To: V _{CCD} - 0.5 . 12 Changed MIN value for V _{CM} in Note 1 of the Electrical Characteristics From: V _{CCL} - 0.5 To: V _{CCD} - 0.5 . 12 Changed Powice I/O Schematics From: V _{CC} To: V _{CC} on the inputs and V _{CCD} on Output and Enabled	•	Added "DT1" to the Minimum internal gap in Insulation and Safety-Related Specifications for DW-16 Package	9
 Changed V_{IOSM} "Maximum surge voltage per DIN V VDE 0884-10" To: "Maximum surge isolation voltage per DIN V VDE V 0884-100" in <i>Insulation Characteristics</i>. Changed V_{IOSM} Test Conditions in <i>Insulation Characteristics</i>. Changed V_{FR} From: "DIN V VDE 0884-10" To: "DIN V VDE V 0884-10" in <i>Insulation Characteristics</i>. Changed R_S Test Conditions in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: T_S To: T_S = 150°C. Changed the <i>Safety-Related Certifications</i> table. Changed title From: "IEC Safety Limiting Values" To: <i>Safety Limiting Values</i>. Changed MIN value for V_{OH} in the <i>Electrical Characteristics</i> From: V_{CCx} - 0.5 To: V_{CC0} - 0.5 Changed MIN value for V_{OH} in the <i>Electrical Characteristics</i>. Changed MIN value for V_{OH} in the <i>Electrical Characteristics</i>. Changed V_{Ccx} To V_{Cc0} in Note 1 of the <i>Electrical Characteristics</i>. Changed Function Table Header information From: INPUT-SIDE V_{Cc} To: VCC₁ and OUTPUT-SIDE V_{Cc} To: V_{Cc0} = 21 Changed Device I/O Schematics From: V_{Cc} To: V_{Cc1} on the inputs and V_{Cc2} on Output and Enabled. Moved Typical ISO7340x Circuit Hook-up to Typical ISO7342x-Q1 Circuit Hook-up from the Design Requirements section to the <i>Detailed Design Procedure</i> section. Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 0.014 mm To: 13.5 μm. Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 0.014 mm To: 13.5 μm. Delete text "per DIN V VDE 0884-10" from V_{IORM} in the table in section <i>Insulation Characteristics</i>. Added V_{IOSM} to the table in section <i>Insulation Characteristics</i>. Changed From: V_{FEX} To V_{FX} in the UNIT column of the table in section <i>Insulation Characteristics</i>. Changed the locs, Supply current, DC to 1 Mbps TYP value From: 3 To 3.2 mA.<th>•</th><th></th><th></th>	•		
VDE V 0884-100" in Insulation Characteristics Changed V _{IDSM} Test Conditions in Insulation Characteristics Changed V _{PR} From: "DIN V VDE 0884-10" "To: "DIN V VDE V 0884-10" in Insulation Characteristics Changed R _S Test Conditions in Insulation and Safety-Related Specifications for DW-16 Package From: T _S To: T _S = 150°C Changed the Safety-Related Certifications table Changed the Safety-Related Certifications table Changed title From: "IEC Safety Limiting Values" To: Safety Limiting Values Changed MIN value for V _{OH} in the Electrical Characteristics From: V _{CCx} - 0.5 To: V _{CC0} - 0.5 Changed MIN value for V _{OH} in the Electrical Characteristics 110 Changed MIN value for V _{OH} in the Electrical Characteristics 111 Changed MIN value for V _{OH} in the Electrical Characteristics 112 Changed MIN value for V _{OH} in the Electrical Characteristics 113 Changed MIN value for V _{OH} in the Electrical Characteristics 114 Changed Min Value for V _{OH} in the Electrical Characteristics 115 Changed Minimum the Detailed Design Procedure section. 116 Changed Function Table Header information From: INPUT-SIDE V _{CC} To: V _{CC0} - 0.5 Changed Evinction Table Committees From: V _{CC} To: V _{CC1} on the inputs and V _{CC2} on Output and Enabled. 210 Changed Device I/O Schematics From: V _{CC} To: V _{CC1} on the inputs and V _{CC2} on Output and Enabled. 211 Changed Minimum internal gap MIN value in Insulation and Safety-Related Specifications for DW-16 Package From: 0.014 mm To: 13.5 μm. Changed Minimum internal gap MIN value in Insulation and Safety-Related Specifications for DW-16 Package From: 13.5 μm. Changed From: V _{PEAK} To V _{PK} in the UNIT column of the table in section Insulation Characteristics. Changed From: V _{PEAK} To V _{PK} in the UNIT column of the table in section Insulation Characteristics. Changed He table in Safety-Related Certifications section - removed text "Certified according to", "Approved under", "Recognized under", changed "pending" To: "planned" Changed the locs, Supply current, DC	•	Changed V _{IOTM} From: "DIN V VDE 0884-10 " To: "DIN V VDE V 0884-10" in <i>Insulation Characteristics</i>	9
 Changed V_{FR} From: "DIN V VDE 0884-10" TO: "DIN V VDE V 0884-10" in Insulation Characteristics	•		
 Changed R_S Test Conditions in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: T_S To: T_S = 150°C 99 Changed the <i>Safety-Related Certifications</i> table 100 Changed title From: "IEC Safety Limiting Values" To: <i>Safety Limiting Values</i> 101 Changed MIN value for V_{OH} in the <i>Electrical Characteristics</i> From: V_{CCx} - 0.5 To: V_{CC0} - 0.5 111 Changed W_{Ccx} To V_{Cc0} in Note 1 of the <i>Electrical Characteristics</i>. 112 Changed V_{Ccx} To V_{Cc0} in Note 1 of the <i>Electrical Characteristics</i>. 113 Changed V_{Ccx} To V_{Cc0} in Note 1 of the <i>Electrical Characteristics</i>. 114 Changed Punction Table Header information From: INPUT-SIDE V_{Cc} To: V_{CC0} - 0.5 115 Changed Device I/O Schematics From: V_{Cc} To: V_{Cc1} on the inputs and V_{Cc0} on Output and Enabled. 115 Moved Typical ISO7340x Circuit Hook-up to Typical ISO7342x-Q1 Circuit Hook-up from the Design Requirements section to the Detailed Design Procedure section. 116 Changed Minimum internal gap MIN value in Insulation and Safety-Related Specifications for DW-16 Package From: 0.014 mm To: 13.5 μm. 117 118 119 119 119 119 119 119 110 110 110 110 110 110 110 111 111 112 113 114 115 115 116 116 117 117 118 119 119 119 110 110 110 111 111 112 113 114 115 115 116 116 116 117 117 118 119 119 119 110 110 110 110 111 111 112 112 113 114 <li< th=""><th>•</th><th>Changed V_{IOSM} Test Conditions in <i>Insulation Characteristics</i></th><th> 9</th></li<>	•	Changed V _{IOSM} Test Conditions in <i>Insulation Characteristics</i>	9
 Changed the Safety-Related Certifications table Changed title From: "IEC Safety Limiting Values" To: Safety Limiting Values Changed MIN value for V_{OH} in the Electrical Characteristics From: V_{CCX} - 0.5 To: V_{CCO} - 0.5 Changed MIN value for V_{OH} in the Electrical Characteristics Changed MIN value for V_{OH} in the Electrical Characteristics Changed MIN value for V_{OH} in the Electrical Characteristics Changed MIN value for V_{OH} in the Electrical Characteristics Changed MIN value for V_{OH} in the Electrical Characteristics Changed Power In Voco in Note 1 of the Electrical Characteristics Changed Function Table Header information From: INPUT-SIDE V_{CC} To: VCC_I and OUTPUT-SIDE V_{CC} To: V_{CCO} Changed Device I/O Schematics From: V_{CC} To: V_{CCI} on the inputs and V_{CCO} on Output and Enabled Moved Typical ISO7340x Circuit Hook-up to Typical ISO7342x-Q1 Circuit Hook-up from the Design Requirements section to the Detailed Design Procedure section Changed the Handling Ratings table to ESD Ratings Changed Minimum internal gap MIN value in Insulation and Safety-Related Specifications for DW-16 Package From: 0.014 mm To: 13.5 µm Changed Minimum internal gap MIN value in Insulation and Safety-Related Specifications for DW-16 Package From: 13.5 µm To: 13 µm Delete text "per DIN V VDE 0884-10" from V_{IORM} in the table in section Insulation Characteristics Changed From: V_{ERK} To V_{PK} in the UNIT column of the table in section Insulation Characteristics Changed The table in Safety-Related Certifications section - removed text "Certified according to", "Approved under", "Recognized under", changed "pending" To: "planned" Changed the I_{CC2}. Supply current, 10 Mbps TYP value From: 3 To 3.2 mA Changed the I_{CC2}. Supply current, 10 Mbps TYP value From: 8.6 To 3.9 mA Changed the I_{CC2}. Supply current, 10 Mbps TYP value From: 0.3 To	•	Changed V _{PR} From: "DIN V VDE 0884-10 " To: "DIN V VDE V 0884-10" in <i>Insulation Characteristics</i>	9
 Changed title From: "IEC Safety Limiting Values" To: Safety Limiting Values	•		9
 Changed MIN value for V_{OH} in the Electrical Characteristics From: V_{CCx} - 0.5 To: V_{CC0} - 0.5	•	Changed the Safety-Related Certifications table	10
 Changed V_{CCx} To V_{CCO} in Note 1 of the <i>Electrical Characteristics</i>	•	Changed title From: " IEC Safety Limiting Values" To: Safety Limiting Values	10
 Changed V_{CCx} To V_{CCO} in Note 1 of the <i>Electrical Characteristics</i>	•	Changed MIN value for V _{OH} in the <i>Electrical Characteristics</i> From: V _{CCx} - 0.5 To: V _{CCO} - 0.5	11
 Changed V_{CCX} To V_{CCO} in Note 1 of the <i>Electrical Characteristics</i>	•		
 Changed Function Table Header information From: INPUT-SIDE V_{CC} To: VCC₁ and OUTPUT-SIDE V_{CC} To: V_{CCO}	•		
 Changed Device I/O Schematics From: V_{CC} To: V_{CCI} on the inputs and V_{CCO} on Output and Enabled	•	Changed V _{CCx} To V _{CCO} in Note 1 of the <i>Electrical Characteristics</i>	12
 Moved <i>Typical ISO7340x Circuit Hook-up</i> to <i>Typical ISO7342x-Q1 Circuit Hook-up</i> from the <i>Design Requirements</i> section to the <i>Detailed Design Procedure</i> section. Changes from Revision B (November 2014) to Revision C Page Changed the Handling Ratings table to ESD Ratings. Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 0.014 mm To: 13.5 µm. Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 13.5 µm To: 13 µm. Delete text "per DIN V VDE 0884-10" from V_{IORM} in the table in section <i>Insulation Characteristics</i>. Changed From: V_{PEAK} To V_{PK} in the UNIT column of the table in section <i>Insulation Characteristics</i>. Added V_{IOSM} to the table in <i>Safety-Related Certifications</i> section - removed text "Certified according to", "Approved under", "Recognized under", changed "pending" To: "planned" Changed Maximum Repetitive Peak Voltage, 1414 V_{PK} To: Maximum surge voltage, 6000 V_{PK} in the VDE column of the table in section <i>Safety-Related Certifications</i>. Changed the I_{CC2}, Supply current, DC to 1 Mbps TYP value From: 3 To 3.2 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 5.1 To 5.6 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 8.6 To 9.3 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA Changed the I_{CC2}, Supply current, 10 Mbps TYP value From: 0.8 To 0.9 mA 	•	Changed Function Table Header information From: INPUT-SIDE V_{CC} To: VCC_I and OUTPUT-SIDE V_{CC} To: V_{CCO}	<mark>21</mark>
Changes from Revision B (November 2014) to Revision C Page Changed the Handling Ratings table to ESD Ratings	•	Changed Device I/O Schematics From: V _{CC} To: V _{CCI} on the inputs and V _{CCO} on Output and Enabled	21
 Changed the Handling Ratings table to ESD Ratings	•		23
 Changed the Handling Ratings table to ESD Ratings			
 Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 0.014 mm To: 13.5 μm	Cł	nanges from Revision B (November 2014) to Revision C	Page
 Changed Minimum internal gap MIN value in <i>Insulation and Safety-Related Specifications for DW-16 Package</i> From: 0.014 mm To: 13.5 μm	•	Changed the Handling Ratings table to ESD Ratings	7
From: 0.014 mm To: 13.5 μm	•

SLLSEI6G - SEPTEMBER 2014-REVISED JANUARY 2017

5 Description (continued)

Used in conjunction with isolated power supplies, these devices help prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. The ISO734x device has integrated noise filter for harsh industrial environment where short noise pulses may be present at the device input pins. The ISO734x device has TTL input thresholds and operates from 3-V to 5.5-V supply levels. Through innovative chip design and layout techniques, electromagnetic compatibility of the ISO734x family of devices has been significantly enhanced to enable system-level ESD, EFT, surge, and emissions compliance.

7 Specifications

7.1 Absolute Maximum Ratings

See (1)

			MIN	MAX	UNIT
V _{CC}	Supply voltage (2)	V _{CC1} , V _{CC2}	-0.5	6	V
	Voltage	INx, OUTx, ENx	-0.5	$V_{CC} + 0.5^{(3)}$	٧
Io	Output current	,		±15	mA
T_J	Maximum junction temperature			150	ô
T _{stg}	Storage temperature		-65	150	°C

⁽¹⁾ Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings

			VALUE	UNIT
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)	±4000	V
V _(ESD)	Electrostatic discharge	Charged device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1500	V

⁽¹⁾ JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V _{CC1} , V _{CC2}	Supply voltage	3		5.5	٧
I _{OH}	High-level output current	-4			mA
I _{OL}	Low-level output current			4	mA
V _{IH}	High-level input voltage	2		5.5	V
V_{IL}	Low-level input voltage	0		0.8	V
t _{ui}	Input pulse duration	40			ns
1 / t _{ui}	Signaling rate	0		25	Mbps
T _J	Junction temperature ⁽¹⁾			136	°C
T _A	Ambient temperature	-40	25	125	°C

⁽¹⁾ To maintain the recommended operating conditions for T_J, see the *Thermal Information* table.

⁽²⁾ All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.

⁽³⁾ Maximum voltage must not exceed 6 V.

⁽²⁾ JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.4 Thermal Information

		ISO734x	
	THERMAL METRIC ⁽¹⁾	DW (SOIC)	UNIT
		16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	78.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case(top) thermal resistance	41	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	43	°C/W
ΤιΨ	Junction-to-top characterization parameter	15.6	°C/W
ΨЈВ	Junction-to-board characterization parameter	42.5	°C/W
R _θ JC(bottom)	Junction-to-case(bottom) thermal resistance	n/a	°C/W

⁽¹⁾ For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

7.5 Power Ratings

 $V_{CC1} = V_{CC2} = 5.5 \text{ V}, T_J = 150 ^{\circ}\text{C}, C_L = 15 \text{ pF}, Input a 12.5-MHz 50\% duty cycle square wave } V_{CC1} = V_{CC2} = 5.5 \text{ V}, T_J = 150 ^{\circ}\text{C}, C_L = 15 \text{ pF}, Input a 12.5-MHz 50\% duty cycle square wave } V_{CC1} = V_{CC2} = 5.5 \text{ V}, T_J = 150 ^{\circ}\text{C}, C_L = 15 \text{ pF}, Input a 12.5-MHz 50\% duty cycle square wave } V_{CC1} = V_{CC2} = 5.5 \text{ V}, T_J = 150 ^{\circ}\text{C}, C_L = 15 \text{ pF}, Input a 12.5-MHz 50\% duty cycle square wave } V_{CC1} = V_{CC2} = 5.5 \text{ V}, T_J = 150 ^{\circ}\text{C}, C_L = 15 \text{ pF}, Input a 12.5-MHz 50\% duty cycle square wave } V_{CC1} = V_{CC2} = 5.5 \text{ V}, T_J = 150 ^{\circ}\text{C}, C_L = 15 \text{ pF}, Input a 12.5-MHz 50\% duty cycle square wave } V_{CC1} = V_{CC2} = 0.5 \text{ V}, T_J = 0.5 \text{ V}, T_J$

	PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT

GENER	AL			
CLR	External clearance ⁽¹⁾	Shortest terminal-to-terminal distance through air	>8	mm
CPG	External creepage ⁽¹⁾	Shortest terminal-to-terminal distance across the package surface	>8	mm
DTI	Distance through the insulation	Minimum internal gap (internal clearance)	>13	μm
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112	>400	V
	Material group		II	
		Rated mains voltage ≤ 300 V _{RMS}	I–IV	
	Overvoltage Category	Rated mains voltage ≤ 600 V _{RMS}	I–III	
		Rated mains voltage ≤ 1000 V _{RMS}	1-11	
DIN V V	DE V 0884-10 (VDE V 0884-10):2006-12 ⁽²⁾			
V _{IORM}	Maximum repetitive peak isolation voltage	AC voltage (bipolar)	1414	V_{PK}
V _{IOTM}	Maximum transient isolation voltage	V _{TEST} = V _{IOTM} ; t = 60 s (qualification); t = 1 s (100% production)	4242	V _{PK}
V _{IOSM}	Maximum surge isolation voltage (3)	Test method per IEC 60065, 1.2/50 µs waveform, V _{TEST} = 1.3 × V _{IOSM} = 7800 V _{PK} (qualification)	6000	V _{PK}
		Method a: After I/O safety test subgroup 2/3, $V_{ini} = V_{IOTM}$, $t_{ini} = 60$ s; $V_{pd(m)} = 1.2 \times V_{IORM} = 1697 V_{PK}$, $t_m = 10$ s	≤5	
q _{pd}	Apparent charge ⁽⁴⁾		≤5	рС
		Method b1: At routine test (100% production) and preconditioning (type test) $V_{ini} = V_{IOTM}$, $t_{ini} = 1$ s; $V_{pd(m)} = 1.875 \times V_{IORM} = 2651 \ V_{PK}$, $t_m = 1$ s (100% production)	≤5	
C _{IO}	Barrier capacitance, input to output (5)	$V_{IO} = 0.4 \sin (2\pi ft), f = 1 \text{ MHz}$	2.4	pF
		V _{IO} = 500 V, T _A = 25°C	>10 ¹²	
R _{IO}	Isolation resistance, input to output (5)	$V_{IO} = 500 \text{ V}, 100^{\circ}\text{C} \le T_{A} \le x^{\circ}\text{C}$	>10 ¹¹	Ω
		V _{IO} = 500 V at T _S = 150°C	>10 ⁹	
	Pollution degree		2	
	Climatic category		40/125/21	
UL 1577	,			
V _{ISO}	Withstand isolation voltage	$\begin{array}{l} V_{TEST} = V_{ISO} = 3000 \ V_{RMS}, t = 60 \ s \ (qualification); \\ V_{TEST} = 1.2 \ \times V_{ISO} = 3600 \ V_{RMS}, t = 1 \ s \ (100\% \\ production) \end{array}$	3000	V _{RMS}

⁽¹⁾ Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance. Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

⁽²⁾ This coupler is suitable for safe electrical insulation only within the maximum operating ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.

⁽³⁾ Testing is carried out in air or oil to determine the intrinsic surge immunity of the isolation barrier.

⁽⁴⁾ Apparent charge is electrical discharge caused by a partial discharge (pd).

⁽⁵⁾ All pins on each side of the barrier tied together creating a two-terminal device

7.7 Safety-Related Certifications

VDE	CSA	UL	CQC
Certified according to DIN V VDE V 0884-10 (VDE V 0884-10):2006-12 and DIN EN 61010-1 (VDE 0411-1):2011-07	Approved under CSA Component Acceptance Notice 5A, IEC 60950-1, and IEC 61010-1	Recognized under UL 1577 Component Recognition Program	Certified according to GB4943.1-2011
Basic Insulation; Maximum Transient Overvoltage, 4242 V_{PK} ; Maximum Surge Isolation Voltage, 6000 V_{PK} ; Maximum Repetitive Peak Isolation Voltage, 1414 V_{PK}	$800~\rm V_{RMS}$ Basic Insulation and $400~\rm V_{RMS}$ Reinforced Insulation working voltage per CSA 60950-1-07+A1+A2 and IEC 60950-1 2nd Ed.+A1+A2; $300~\rm V_{RMS}$ Basic Insulation working voltage per CSA 61010-1-12 and IEC 61010-1 3rd Ed.	Single protection, 3000 V _{RMS}	Reinforced Insulation, Altitude ≤ 5000 m, Tropical Climate, 250 V _{RMS} maximum working voltage

7.8 Safety Limiting Values

Safety limiting intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier, potentially leading to secondary system failures.

	PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
I _S	Safety input, output, or supply	$R_{\theta JA}$ = 78.4 °C/W, V_I = 5.5 V, T_J = 150°C, T_A = 25°C, see Figure 1			290	A
	current	$R_{\theta JA}$ = 78.4 °C/W, V_I = 3.6 V, T_J = 150°C, T_A = 25°C, see Figure 1		mA		
T _S	Safety temperature				150	

The safety-limiting constraint is the maximum junction temperature specified in the data sheet. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the *Thermal Information* table is that of a device installed on a high-K test board for leaded surface-mount packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

9 Detailed Description

9.1 Overview

The isolator in Figure 18 is based on a capacitive isolation-barrier technique. The I/O channel of the device consists of two internal data channels, a high-frequency (HF) channel with a bandwidth from 100 kbps up to 25 Mbps, and a low-frequency (LF) channel covering the range from 100 kbps down to DC.

In principle, a single-ended input signal entering the HF channel is split into a differential signal through the inverter gate at the input. The following capacitor-resistor networks differentiate the signal into transient pulses, which then are converted into CMOS levels by a comparator. The transient pulses at the input of the comparator can be either above or below the common-mode voltage VREF depending on whether the input bit transitioned from 0 to 1 or 1 to 0. The comparator threshold is adjusted based on the expected bit transition. A decision logic (DCL) at the output of the HF channel comparator measures the durations between signal transients. If the duration between two consecutive transients exceeds a certain time limit, (as in the case of a low-frequency signal), the DCL forces the output-multiplexer to switch from the high-frequency to the low-frequency channel.

Because low-frequency input signals require the internal capacitors to assume prohibitively large values, these signals are pulse-width modulated (PWM) with the carrier frequency of an internal oscillator, thus creating a sufficiently high frequency, capable of passing the capacitive barrier. As the input is modulated, a low-pass filter (LPF) is needed to remove the high-frequency carrier from the actual data before passing it on to the output multiplexer.

9.2 Functional Block Diagram

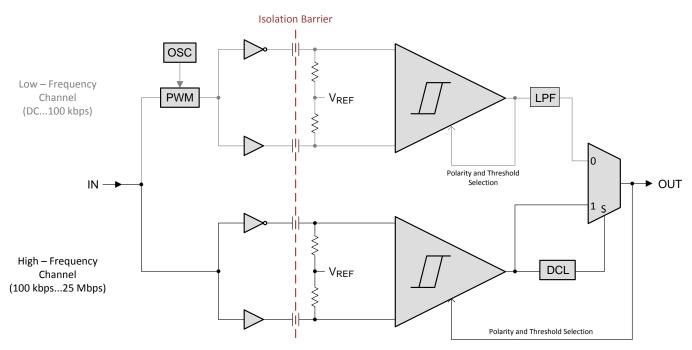

Figure 18. Conceptual Block Diagram of a Digital Capacitive Isolator

9.3 Feature Description

The ISO734x family of devices are available in multiple channel configurations and default output state options to enable wide variety of application uses.

PART NUMBER	CHANNEL DIRECTION	RATED ISOLATION	MAXIMUM DATA RATE	DEFAULT OUTPUT		
ISO7340C	4 Forward,			High		
ISO7340FC	0 Reverse 3 Forward,		Lo			
ISO7341C		2000) / 4040) (1)	OF Mhno	High		
ISO7341FC	1 Reverse	3000 V _{RMS} / 4242 V _{PK} ⁽¹⁾	25 Mbps	Low		
ISO7342C	2 Forward,			High		
ISO7342FC	2 Reverse			Low		

⁽¹⁾ See the Safety-Related Certifications section for detailed isolation ratings.

9.3.1 Electromagnetic Compatibility (EMC) Considerations

Many applications in harsh industrial environment are sensitive to disturbances such as electrostatic discharge (ESD), electrical fast transient (EFT), surge, and electromagnetic emissions. These electromagnetic disturbances are regulated by international standards such as IEC 61000-4-x and CISPR 22. Although system-level performance and reliability depends, to a large extent, on the application board design and layout, the ISO734x family of devices incorporates many chip-level design improvements for overall system robustness. Some of these improvements include:

- Robust ESD protection cells for input and output signal pins and inter-chip bond pads.
- Low-resistance connectivity of ESD cells to supply and ground pins.
- Enhanced performance of high voltage isolation capacitor for better tolerance of ESD, EFT and surge events.
- Bigger on-chip decoupling capacitors to bypass undesirable high energy signals through a low impedance path.
- PMOS and NMOS devices isolated from each other by using guard rings to avoid triggering of parasitic SCRs.
- Reduced common mode currents across the isolation barrier by ensuring purely differential internal operation.

9.4 Device Functional Modes

Table 1 lists the functional modes for the ISO734x family of devices.

Table 1. Function Table (1)

V _{CCI}	V _{cco}	INPUT	OUTPUT ENABLE	OUTPUT (OUTx)				
		(INx)	(ENx)	ISO734xC	ISO734xFC			
		Н	H or Open	Н	н			
DU	PU	L	H or Open	L	L			
PU		X	L	Z	Z			
		Open	H or Open	H ⁽²⁾	L ⁽³⁾			
PD	PU	X	H or Open	H ⁽²⁾	L ⁽³⁾			
X	PU	X	L	Z	Z			
Х	PD	Х	Х	Undetermined	Undetermined			

 V_{CCI} = Input-side V_{CC} ; V_{CCO} = Output-side V_{CC} ; PU = Powered up ($V_{CC} \ge 3$ V); PD = Powered down ($V_{CC} \le 2.1$ V); X = Irrelevant; H = High level; L = Low level; Z = High Impedance In fail-safe condition, output defaults to high level

9.4.1 Device I/O Schematics

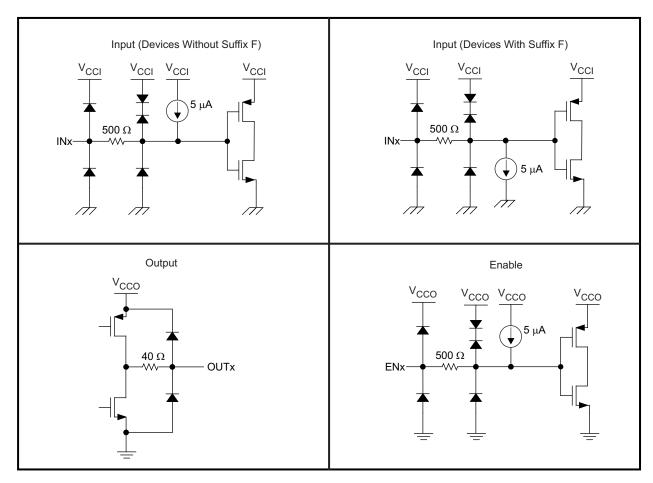

Figure 19. Device I/O Schematics

In fail-safe condition, output defaults to low level

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

The ISO734x family of devices use single-ended TTL-logic switching technology. The supply voltage range is from 3 V to 5.5 V for both supplies, V_{CC1} and V_{CC2} . When designing with digital isolators, keep in mind that because of the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is, μC or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

10.2 Typical Application

10.2.1 Isolated Data Acquisition System for Process Control

The ISO734x family of devices combined with Texas Instruments' precision analog-to-digital converter and mixed signal micro-controller can create an advanced isolated data acquisition system as shown in Figure 20.

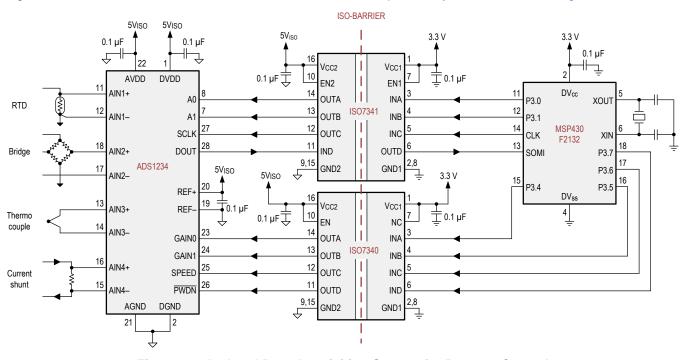

Figure 20. Isolated Data-Acquisition System for Process Control

10.2.1.1 Design Requirements

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the ISO734x family of devices only requires two external bypass capacitors to operate.

10.2.1.2 Detailed Design Procedure

10.2.1.2.1 Typical Supply Current Equations

For the equations in this section, the following is true:

- I_{CC1} and I_{CC2} are typical supply currents measured in mA
- f is data rate measured in Mbps
- C_I is the capacitive load measured in pF

10.2.1.2.1.1 ISO7340x

At
$$V_{CC1} = V_{CC2} = 5 \text{ V}$$
:

$$I_{CC1} = 0.54366 + (0.0873 \times f)$$
 (1)

$$I_{CC2} = 2.74567 + (0.08433 \times f) + (0.01 \times f \times C_L)$$
 (2)

At
$$V_{CC1} = V_{CC2} = 3.3 \text{ V}$$
:

$$I_{CC1} = 0.3437 + (0.04922 \times f) \tag{3}$$

$$I_{CC2} = 2.1068 + (0.04374 \times f) + (0.007045 \times f \times C_1)$$
(4)

10.2.1.2.1.2 ISO7341x

At
$$V_{CC1} = V_{CC2} = 5 \text{ V}$$
:

$$I_{CC1} = 1.7403 + (0.1006 \times f) + (0.001711 \times f \times C_{L})$$
(5)

$$I_{CC2} = 2.502 + (0.09629 \times f) + (0.00687 \times f \times C_1)$$
(6)

At
$$V_{CC1} = V_{CC2} = 3.3 \text{ V}$$
:

$$I_{CC1} = 1.2915 + (0.046 \times f) + (0.00185 \times f \times C_L)$$
(7)

$$I_{CC2} = 1.8833 + (0.0566 \times f) + (0.004514 \times f \times C_L)$$
(8)

10.2.1.2.1.3 ISO7342x

At
$$V_{CC1} = V_{CC2} = 5 \text{ V}$$
:

$$I_{CC1}$$
, $I_{CC2} = 2.1254 + (0.08694 \times f) + (0.004868 \times f \times C_L)$ (9)

At $V_{CC1} = V_{CC2} = 3.3 \text{ V}$:

$$I_{CC1}$$
, $I_{CC2} = 1.5912 + (0.0410 \times f) + (0.003785 \times f \times C_L)$ (10)

11 Power Supply Recommendations

To help ensure reliable operation at data rates and supply voltages, a 0.1- μ F bypass capacitor is recommended at input and output supply pins (V_{CC1} and V_{CC2}). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments' SN6501. For such applications, detailed power supply design and transformer selection recommendations are available in SN6501 Transformer Driver for Isolated Power Supplies.

12 Layout

12.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see Figure 28). Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/in².
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links
 usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, see the *Digital Isolator Design Guide*.

12.1.1 PCB Material

For digital circuit boards operating at less than 150 Mbps, (or rise and fall times greater than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 UL94V-0 printed circuit board. This PCB is preferred over cheaper alternatives because of lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and the self-extinguishing flammability-characteristics.

12.2 Layout Example

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

TBD: The Pb-Free/Green conversion plan has not been defined.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

PACKAGE OPTION ADDENDUM

10-Nov-2016

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes. **Pb-Free** (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL. Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale (www.ti.com/legal/termsofsale.html) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
